ROHS PROJECT

The directive n°2002/95/CE aims to limit the use of dangerous substances (lead, mercury, cadmium, hexavalent chromium, PBDE, PBE) into electrical and electronic equipment. Adixen products are not in the scope of RoHS directive but we want to protect the environment:

A lot of actions have already been launched:

- ✓ Inventory of all the articles including these substances
- ✓ Action to eliminate these substances
- ✓ Qualification of new materials, new parts...

All Adixen products will be RoHS compliant by December, 2007.
